Featured Research Guide – Health Sciences Gateway

by Peg Burnette

In addition to the newly designed Web site, the library now offers Research Guides, a collection of subject-specific or course-specific Web-based guides that provide streamlined access to databases, e-books, e-journals, Web sites and more for study and research. Each issue of E-ppendix will highlight one of the many health sciences research guides developed by UIC health sciences librarians.

Whether you are involved in research, instruction or learning, the Health Sciences Gateway research guide provides access to health sciences databases, clinical tools, books, journals, tutorials and other resources for all health sciences users. The guide includes links to comprehensive clinical tools such as DynaMed, Essential Evidence Plus, and UpToDate, that offer evidence-based point of care information for physicians, nurses, residents, medical and nursing students and other practitioners. The Doing Research tab includes a list of key databases for primary and secondary literature in the biomedical sciences. Links to RefWorks and Ask A Librarian provide additional tools for research and assistance.

If you need medical images or other multimedia, the Images, Audio & Video tab includes links to licensed content plus a complete list of procedure video titles. Use the Library Toolbox page for quick access to the library catalog, full-text online journals, RefWorks and more. If you get stuck, have a question, or want to brush up on search skills, the Tutorials page offers user guides and tutorials for PubMed, CINAHL and other health sciences resources.

UIC health sciences librarians welcome the opportunity to collaborate with you on a customized health sciences research guide or course guide. Contact information is included on the Welcome page or Home page of all health sciences guides. Visit the Research Guides home page, researchguides.uic.edu, to see other guides in the Health Sciences collection.
