AccessPediatrics, AccessPhysiotherapy, and Nursing Education in Video

By Deborah Blecic

The Library of the Health Sciences is pleased to announce three new databases in the health sciences: AccessPediatrics, AccessPhysiotherapy, and Nursing Education in Video.

AccessPediatrics provides access to resources in the field of pediatrics, from neonatology to adolescent medicine. Key resources in the database include Rudolph’s Pediatrics and ten other textbooks, a bank of 2,500 review questions from Specialty Board Review: Pediatrics and Pediatrics PreTest Self Assessment and Review, and 60 cases from Case Files: Pediatrics. The database also contains images, videos and animations, drug information and patient handouts, and calculators.

AccessPhysiotherapy provides access to resources in physical therapy and kinesiology. It includes 17 books, test questions from 7 books, an interactive cadaver dissection tool, images, over 90 videos, orthopedic case studies, drug information and patient handouts.

Nursing Education in Video is a collection that currently contains 296 online videos totaling 94 hours; the collection may increase in the future. It is intended to support the education and training of nurses and other healthcare workers. The transcripts of the videos are searchable, making it easier to find relevant footage. For more information on the video collection and the many ways the videos can be used, see About Nursing Education in Video. This resource was partially acquired with funding from the Library/IT Assessment.

You can connect to all three new databases and a myriad of others from the Library’s Databases A-Z page.

Please contact me if you have any questions about these databases or any of the other resources provided by the Library of the Health Sciences.
