Health Sciences Collections Update – Spring 2013

By Deborah Blecic

The UIC Library is pleased to announce a subscription to the Scopus database. Scopus is the world’s largest abstract and citation database of peer-reviewed literature with tools that track, analyze and visualize research. Scopus covers over 20,000 titles from 5,000 publishers and contains 49 million records. It has 100% Medline coverage.

Using Scopus as a researcher you can:

- Find out who is citing you, and how many citations an article or an author has received
- Analyze citations for a particular journal issue, volume or year
- Use the refine results overview to quickly see the main journals, disciplines and authors that publish in your area of interest
- Discover important and relevant articles
- Check out the work and citations of other authors
- Click on the cited by and reference links to track research trends and make connections. You can do this within or across disciplines you are interested in

(bulleted list adapted from www.info.sciverse.com/scopus/why-scopus/academia)

The Library also continues to add to its collection of E-books. If you do not see a book you need on the shelf, check UIICCAT (the library’s online catalog) as we now get many books electronically.
